# Travel Itinerary Page

## Introduction

The Travel Itinerary Page is a simple yet effective HTML-based project designed to help users plan and organize their trips. It provides a structured layout showcasing essential travel details such as the trip overview, daily schedules with specific activities, and sections dedicated to accommodation and transportation. With clear headings and organized content, this page offers a comprehensive guide for travellers, making it easy to visualize their itinerary and make the most of their journey.

## Objective

- **Practice HTML Skills:** The goal is to improve my ability to use HTML by creating a structured and clear travel itinerary page. This helps in learning how to organize and display information effectively on a website.
- **Design a User-Friendly Page:** The project aims to focus on making a webpage that is easy to use and navigate. It's about ensuring that the travel details are clearly presented and easy for users to find.
- **Apply Web Design Concepts:** The objective is to apply basic web design principles to create a practical and functional page. This includes organizing content and integrating useful features to make the page more helpful for planning a trip.

## Features

- **Trip Overview Section:** Provides a summary of the trip, including the destination, travel dates, and total cost. This section helps users get a quick snapshot of their entire journey.
- **Daily Itinerary:** Details the daily schedule with specific activities, locations, and times. It helps users plan their day-by-day activities and ensures they don't miss any key experiences.
- **Accommodation and Transportation Information:** Includes sections with links to find accommodation options and transportation details. This feature assists users in organizing their stay and travel within the destination.
