Recipe Page

Introduction

This project is a static HTML page designed to present a recipe in a structured format. The page includes sections for listing ingredients with their quantities, step-by-step cooking instructions, and key information such as preparation time, cooking time, and serving size. The code demonstrates how to organize content with HTML elements such as headers, lists, and sections to effectively display detailed recipe information.

Objective

- **Learn HTML Structure:** Understand how to use HTML elements to organize and present detailed information. This includes working with headings, lists, and sections to create a clear and accessible layout for recipe content.
- **Practice Content Organization:** Develop skills in structuring content effectively, focusing on how to display ingredients, cooking instructions, and key recipe details in a user-friendly format.
- **Enhance HTML Formatting Skills:** Gain experience in formatting text and lists to improve readability and usability. This project helps in learning how to use HTML to create well-organized and visually appealing web pages for presenting detailed information.

Features

- **Detailed Ingredient List:** Displays a comprehensive list of ingredients required for the recipe, divided into categories for different components of the dish.
- **Step-by-Step Cooking Instructions:** Provides clear, ordered steps for preparing the dish, ensuring users can follow along easily.
- **Cooking and Serving Information:** Includes sections outlining key details such as total cooking time, preparation time, cooking time, and the number of servings.
- **Organized Layout:** Utilizes HTML elements like headers, lists, and sections to structure the content clearly and make it easy to navigate.
