General Knowledge Quiz

Introduction

This HTML quiz page allows users to test their general knowledge by selecting answers to 15 multiple-choice questions. The page features radio buttons for each question and includes a basic form structure for submitting answers, though without JavaScript, the form's functionality is limited. The project showcases fundamental HTML elements and form handling, providing a straightforward example of how to create an interactive quiz interface.

Objective

- **Learn HTML Forms:** Get practical experience with HTML forms, including how to use radio buttons for multiple-choice questions and text fields for user information.
- **Improve Page Layout:** Practice organizing HTML content to create a clear and easy-to-use quiz page, using elements like headings and sections.
- **Understand User Interaction:** See how users interact with forms and get ready for adding more advanced features later, like using JavaScript to make the quiz more dynamic.

Features

- **Multiple-Choice Questions:** Users can answer 15 general knowledge questions using radio buttons to select their answers.
- **Form Submission:** The quiz includes a form where users can enter their name and email address before submitting their answers, though the form submission is basic without JavaScript.
- **Reset and Submit Options:** There are buttons to reset the form and start over, as well as to submit the answers.
- **Organized Layout:** The quiz is structured with clear sections and headings to make it easy to navigate and understand.
